

REEMS CREEK NURSERY

Summer 2022 Vegetables

Warm Season Vegetables

Not all inventory will be available at the same time. Inventory will be available as transplants are ready.

All of our farm-grown vegetables are raised sustainably using organic methods and love. **Availability is dependent on weather and other factors.** When our homegrown veggie supply runs short, we occasionally bring in conventional vegetables and label them accordingly.

We recommend that you wait to plant warm season vegetables until after May 10 in Buncombe County, and May 15 in Madison and Yancey Counties.

Artichoke - Green Globe
Asparagus - Jersey Knight

BEANS

Beans - Blue Lake Bush
Beans - Rattlesnake
Beans - Midori Giant Bush Soybean

Celeriac - Brilliant
Celery - Peppermint Stick
Celery - Tango

CORN

Corn - Natural sweet (Bicolor)
Corn - Vision (Yellow)

Cucamelon - Mexican Sour Gherkin (**rare, heirloom**)

CUCUMBERS

Cucumber - Boston Pickling (**heirloom**)
Cucumber - Burpless Bush
Cucumber - Carolina
Cucumber - Diva
Cucumber - Homemade Pickles
Cucumber - Lemon (**heirloom**)

Cucumber - Marketmore
Cucumber - Straight 8 (**heirloom**)

EGGPLANTS

Eggplant - Bride
Eggplant - Classic
Eggplant - Orient Express

Malabar Spinach

MUSKMELONS

Cantaloupe - Ambrosia
Cantaloupe - Emerald Gem (**heirloom**)
Cantaloupe - Hale's Best
Cantaloupe - Sarah's Choice
Honeydew - Early Honeymoon

OKRA

Okra - Clemson Spineless (**heirloom**)

ONIONS

Onion - Cabernet - red
Onion - Candy - sweet
Onion - White Castle - white sweet

PEPPERS - HOT

Pepper - Hot - Anaheim
Pepper - Hot - Ancho / Trident
Pepper - Hot - Banana / Hungarian Wax (**heirloom**)

Tomato - Sweet Million (cherry)
Tomato - Yellow Pear (low acid)

WATERMELONS

Charleston Gray (**heirloom**)
Crimson Sweet
Moon & Stars (**heirloom**)
Sugar Baby (icebox)

TERMINOLOGY

Heirloom: is a plant variety that has a history of being passed down within a family or community. An heirloom variety must be open-pollinated, but not all open-pollinated plants are heirlooms (yet). They are also appropriate for seed saving.

Open-pollination: is when pollination occurs by insect, bird, wind, or other natural mechanisms. Open-pollinated plants are genetically diverse, and are appropriate for seed saving.

Hybrid: Hybrid varieties have been bred to have desirable characteristics, such as better disease or pest resistance, higher yields, and larger fruit. Due to basic genetics, these characteristics do not last beyond one generation, due to that, hybrids are not appropriate for seed saving. Hybrids are NOT the same as Genetically Modified.

All of our plants are GMO-free.

Tomatoes from Mills River, NC were bred by the famous NCSU plant breeder and professor [Randy Gardner](#), aka the Tomato King. Randy has dedicated his professional career (and now retirement) to breeding disease resistant tomatoes that perform well in our area. It is not an exaggeration to say that he has revolutionized tomato growing on the East Coast and has saved numerous farms who would've gone under due to crop failures with his naturally disease-resistant plants. In addition to disease resistance, he also selects for flavor.

He breeds the old-fashioned way, with a pair of tweezers and an electric toothbrush.
